

TRANSFER FACTOR

ADVANCED FORMULA™

IT'S VITAL TO HAVE A HEALTHY IMMUNE SYSTEM.

Our bodies are under attack from many more health threats than ever before. We are surrounded by millions of threats that have the potential to enter our bodies and cause harm.

THE IMMUNE SYSTEM

contains thousands of cells, molecules, and body chemicals that are laboring night and day to keep you healthy—even alive.

The immune system requires good recognition and communication to coordinate its defenses and to appropriately respond to health threats—and defeat them.

**REDUCING OXIDATION (FREE
RADICAL DAMAGE)**

TRANSFER FACTOR

WHAT ARE TRANSFER FACTORS?

Unlike common supplements you find in every health food store, transfer factors aren't vitamins, minerals, herbs or phytonutrients. Instead, they are smart peptide molecules that transfer immune memory and knowledge from one entity to another and are part of a ground-breaking approach to immune system support.

IDENTIFY • REACT • RETAIN

THE CHARACTERISTICS OF TRANSFER FACTOR

Transfer factors are extremely small smart peptide molecules, approximately 6,000-10,000 Daltons in size, made up of 44 amino acid sequences. (Really small)

In a nutshell, transfer factors are essentially the knowledge and experiences of an entity's immune system encoded on extremely small peptide molecules that can be consumed for our own immune systems to learn from. Transfer factors are structurally identical and compatible between humans and animals.

TRANSFER FACTORS ARE MASTER REGULATORS

There are hundreds of different cell types and body chemicals involved in the function of our immune system. Your immune system has smart molecules that regulate this activity. One category of these master managers/regulators is called cytokines, which have several important functions.

There is a great deal of communication taking place as your immune system coordinates activities. Cytokines communicate with other cells and molecules organizing these synergized functions. Transfer factors are in the cytokine category of master regulators/managers.

1

TRANSFER FACTORS IDENTIFY THREATS

Transfer factor is a smart molecule that coordinates and manages an education system for your natural immune system. This process starts them moment you are born.

Transfer factors store information about the activities of your immune system and characteristics of threats that your body encounters.

Each time a human (or mammal) comes in to contact with a threat and defeats it, the characteristics of that threat is encoded on a transfer factor molecule so the next time it encounters the same (or similar) threat, it will recognize it quickly and coordinate the appropriate immune response to eradicate it.

WANTED

GERM

DEAD ONLY

2

TRANSFER FACTORS REACT CORRECTLY TO THREATS

Transfer factors help educate your body to respond correctly to a threat. It's role is to help the body to do the right thing to help deal with the threat it is encountering in the most efficient and effective way.

a brief history

ON TRANSFER FACTOR

In 1949, Dr. H. Sherwood Lawrence, a New York University immunologist, determined that an immune system response could be transferred from a donor to a recipient through a white blood cell extract. He concluded that these extracts contained a “factor” capable of transferring the donor’s immunity information to the recipient. Dr. Lawrence subsequently coined the term “transfer factor.”

Dr. H. Sherwood Lawrence

- **Founding editor of the Journal of Cellular Immunology.**
- **Member of the National Academy of Sciences.**
- **Graduated from New York University’s School of Medicine in 1943.**
- **Head of Infectious Diseases and Immunology at N.Y.U. in 1959.**
- **Director of N.Y.U.’s Cancer Center from 1974 to 1979.**
- **Director of N.Y.U.’s AIDS Research Center from 1989 to 1994.**

THOROUGHLY RESEARCHED!

THERE ARE LITERALLY THOUSANDS OF SCIENTIFIC STUDIES ON TRANSFER FACTORS BY SCIENTISTS FROM ALL OVER THE WORLD! FROM 1974 TO 1999, SCIENTISTS FROM ITALY AND FRANCE USED TRANSFER FACTORS ON 1647 PATIENTS WITH NO SIDE EFFECTS. ONE-THIRD OF THESE PATIENTS WERE OBSERVED FOR 25 YEARS.

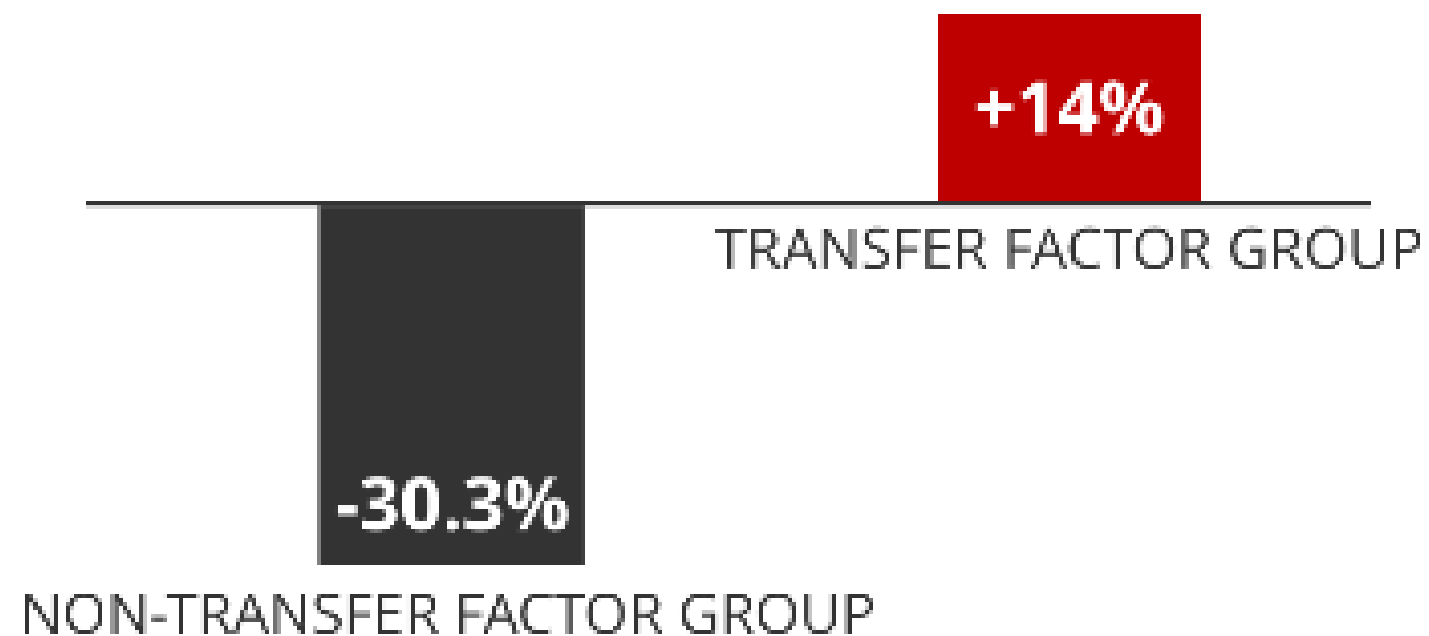

NIH

The National Institute of Health emphasizes on the benefits of Transfer Factors by publishing 12,000 scientific studies on its benefits for the immune system.

TRANSFER FACTOR REDUCED LIPID OXIDATION BY **44.3%***

ANTIOXIDANT EFFECTS OF
TRANSFER FACTOR ON
LIPID INTEGRITY

44.3% IMPROVEMENT

Although transfer factors are not antioxidants, transfer factors do regulate production of the body's own natural antioxidants and anti-oxidation process. In one study, transfer factors reduced lipid oxidation by 44.3%.*

Your brain, cholesterol, and every cell membrane in your body is made up of lipids. Protecting these vital organs will revolutionize your health!

TRANSFER FACTOR INCREASED THE BODY'S NATURAL PRODUCTION OF THE ANTIOXIDANT GLUTATHIONE-S-TRANSFERASE BY **150%***

Transfer factors increased the production of glutathione-S-transferase by 150%! This enzyme is responsible for detoxifying every cell in your body and especially in your liver. Three of the body's primary antioxidant enzymes, glutathione, catalase, and SOD2 were increased.

WHAT MAKES OUR FORMULATION ELITE?

WHY IS OUR PRODUCT ELITE?

01

We have more than 2x's more transfer factor in our product than our closest competitor but it costs less!

02

We only use highest quality of ingredients

03

Our formulation combines the power of transfer factor with the best nutrients to help enhance our immune system

MADE IN THE USA 

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

SUGGESTED USE: As a dietary supplement to promote and support a healthy immune system, take two (2) capsules daily or as directed by your health care professional.

The Immune System Revolution

IDENTIFY • REACT • RETAIN

Transfer Factor is a smart molecule in our bodies whose job is to identify a potential threat, react intelligently and precisely to that threat, and retain that information throughout your future so it can become immune to that threat the next time your body encounters it.
